

# Clustra Pilot Plan Outline

Sample private AI pilot deliverable

Preview material for enterprise evaluation. Not a legal document or customer deployment proof.

## Pilot Snapshot

- Goal: validate one private AI workload in one customer-controlled environment.
- Scope: first model deployment, one governed endpoint, observability validation, readiness report.
- Attendees: CTO or platform lead, security reviewer, infrastructure owner, application owner.
- Decision: whether the platform can move toward production hardening.

# Clustra Pilot Plan Outline

Sample private AI pilot deliverable

Preview material for enterprise evaluation. Not a legal document or customer deployment proof.

## Four-Week Workplan

- Week 1: discovery, architecture review, data boundary, success criteria.
- Week 2: environment readiness, first model workflow, gateway model name.
- Week 3: application or agent integration, trace capture, usage attribution.
- Week 4: health validation, risk review, production-readiness report.

Preview material for enterprise evaluation. Not a legal document or customer deployment proof.

## Success Criteria

- Model deployed inside customer-controlled infrastructure.
- Traffic reaches the model through one governed endpoint.
- Security can review identity, network path, data boundary, retention, and audit evidence.
- Platform team can inspect readiness, latency, usage, errors, and capacity signals.
