

# Clustra Reference Architecture Preview

Sample deployment topology artifact

Preview material for enterprise evaluation. Not a legal document or customer deployment proof.

## Topology Overview

- Applications and agents call one governed Clustra Gateway.
- Gateway routes approved model names to private model frontends.
- Private runtime serves models behind the gateway boundary.
- Observe and Monitor capture request behavior and infrastructure health.

Sample deployment topology artifact

Preview material for enterprise evaluation. Not a legal document or customer deployment proof.

## Plane Boundaries

- Control plane: deployment intent, model approvals, policy, platform changes.
- Data plane: app and agent request path through the gateway.
- Runtime plane: private serving, model cache, scheduling, readiness.
- Evidence plane: traces, usage attribution, audit history, health signals.

## Review Checklist

- Map identity integration points.
- Confirm network route assumptions.
- Confirm runtime ownership and scaling model.
- Confirm telemetry, logs, traces, and retention ownership.
